Tour de table - Roundtable

My name is....

I study....

My main interests are...

What I hope to gain from this workshop is...

Abstract

This hands-on introductory workshop will introduce students to **knowledge graphs**, focusing on their practical application in **knowledge representation**. Specifically, the session will center on extracting and **structuring information** from **Ancient Greek summaries of Classical tragedies**.

The workshop consists of two parts:

- Theoretical Foundations: Students will be introduced to the foundational concepts of knowledge graphs, their significance, Symbolic AI, ontologies, standards and their practical implications. This segment will also include a demonstration of the KGE (Knowledge Graph Editor) tool, showcasing how it can be used to represent such ancient text.
- Practical Application: Students will work in groups to construct knowledge graphs using the KGE. Each team will model selected summaries of Ancient Greek tragedies, identifying key entities and their relationships. The session will conclude with brief presentations of the generated graphs, followed by feedback and discussion. The session will conclude with a discussion of the Large Language Models products created from the data of the ancient summaries under evaluation.

This hands-on approach will provide participants with both a conceptual understanding and practical experience in knowledge graph creation.

Program

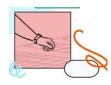

10.00-11.30 Part 1

11.30-12.00 Break

12.00-13.30 Part 2

Theoretical Foundations: Students will be introduced to the foundational concepts of knowledge graphs, their significance, Symbolic AI, ontologies, standards and their practical implications. This segment will also include a demonstration of the KGE (Knowledge Graph Editor) tool, showcasing how it can be used to represent such ancient text.

Program

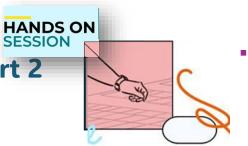

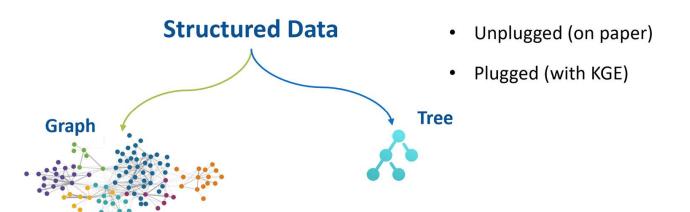

10.00-11.30 Part 1

11.30-12.00 Break

12.00-13.30 Part 2

Practical Application: Students will work in groups to construct knowledge graphs using the KGE. Each team will model selected summaries of Ancient Greek tragedies, identifying key entities and their relationships. The session will conclude with brief presentations of the generated graphs, followed by feedback and discussion. The session will conclude with a discussion of the Large Language Models products created from the data of the ancient summaries under evaluation.

Concepts to be introduced...

- Ancient Greek summaries of classical tragedies
- knowledge graphs
- Symbolic Al
- ontologies
- standards

Part 1

What is a 'hypothesis'?

Aristophanes of Byzantium

1.2 It's all about the graph

Aristophanes of Byzantium Knowledge Graph DBpedia – Wikidata – LOD

RDF and other standards (for the SW, Ontologies) – KGE

Break

Part 2

- 2.1 Practical works (in groups)
 - 2 Report back to the plenary

Part 1

1.1 It's all about the text

1.2 It's all about the graph

Break

Part 2

2.1 Practical works (in groups)

Work in groups of 4-6 : find a name for your team

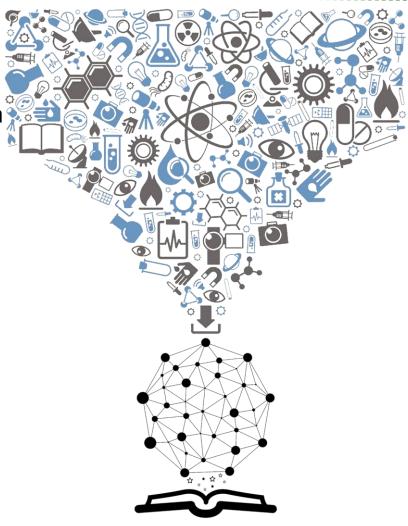

Choose 1 to 4 hypotheseis

Model on paper

Model with Knowledge Graph Editor (KGE)

2.2 Report back to the plenary

2.3 Conclusions

By playwright

Aeschylus

- 467 BCE Seven Against Thebes
- 458 BCE Eumenides (part of the Oresteia)
- ~472 BCE Prometheus Bound (traditional but debated)

Sophocles

- 441 BCE Antigone
- ~429 BCE Oedipus Tyrannus (Rex)

Euripides

- 438 BCE Alcestis
- 431 BCE Medea
- ~426–424 BCE Andromache
- ~424–421 BCE Heracleidae
- 415 BCE Trojan Women
- 414 BCE Iphigenia in Tauris
- 412 BCE Ion
- 409 BCE Phoenician Women
- 408 BCE Orestes
- 405 BCE The Bacchae †
- Unknown Cyclops (satyr play)
- **Unknown** Rhesus † (doubtful authorship)

By year &

```

TIMELINE – Aeschylus

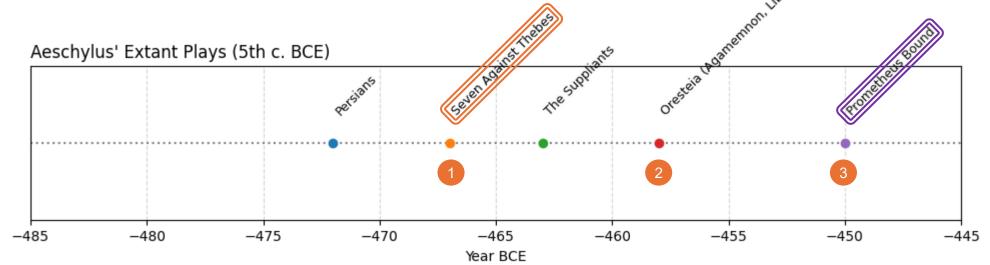

we'll model 3 ancient summaries

TIMELINE - Sophocles

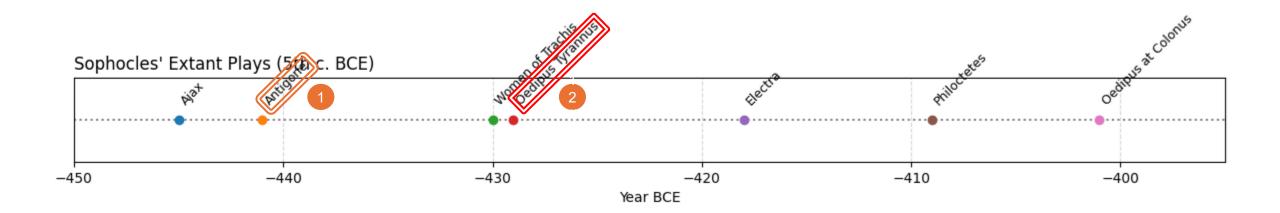

7 extant plays

we'll model 2 ancient summaries

TIMELINE - Euripides

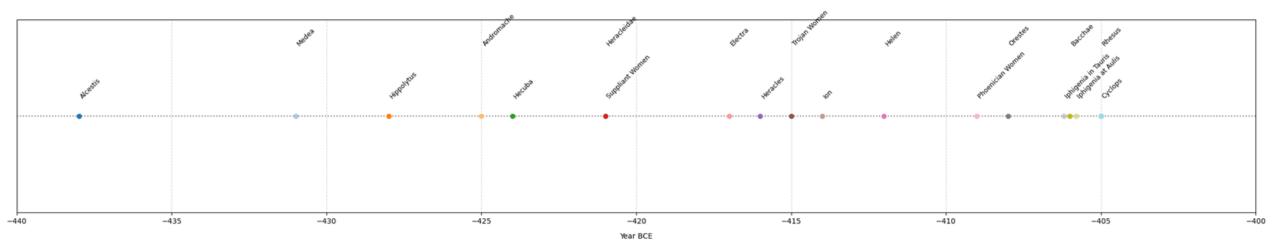

19 extant plays

we'll model 12 ancient summaries

Euripides' Extant Plays (5th to 4th c. BCE)

^{*}Some dates are disputed.

TIMELINE - Euripides

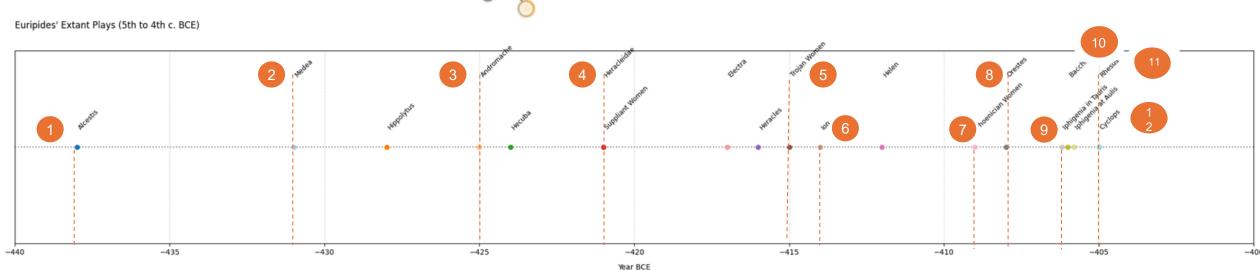

19 extant plays

we'll model 12 ancient summaries

Plays whose hypotheseis we will model

What is a 'hypothesis'?

Hypothesis (drama)

文A 1 language ~

Article Talk Tools ~ Edit View history

From Wikipedia, the free encyclopedia

In its ancient usage, a **hypothesis** is a summary of the plot of a classical drama. [1] These hypotheses were often copied as a preface to the text of the surviving Athenian tragedies in Medieval manuscripts.^[1] They also indicated whether any other tragic poets had dramatised the story, gave its setting, identified the chorus and the character who delivered the prologue, and indicated the date of its first production and the titles of the poet's other plays performed that year, as well as the poet's rivals in the dramatic competition and the prize awarded. [2]

hypothesis/hupothesis ancient scholar's introduction to a play

References [edit]

- 1. ^ a b Easterling (1997, 202) and Gregory (2005, 271-272, 384).
- 2. A Gregory (2005, 384-385).

Sources [edit]

- Easterling, P. E., ed. 1997. The Cambridge Companion to Greek Tragedy. Cambridge Companion Cambridge: Cambridge UP. ISBN 0-521-42351-1.
- Gregory, Justina, ed. 2005. A Companion to Greek Tragedy. Blackwell Companions to the Ancient MA and Oxford: Blackwell. ISBN 1-4051-7549-4.

Aristophanes of Byzantium and Aristarchus of Samos were the most important names in the next generation, the great age of Alexandrian scholarship. The former devoted his attentions to tragedy, and various material from his hand has come down to us in the scholia to Euripides, sometimes at one or two removes. Aristophanes is the source for the more scholarly kind of hypothesis copied as a preface to some of our tragedies in the medieval manuscripts. These hypotheses give the very briefest summary of the plot, usually a single sentence; they indicate whether the story was treated by other dramatists, and give the geographical location of the action, the identity of the chorus, the speaker of the prologue, and the date of the production

together with the names of the poet's other plays of that year, the names of his competitors, and whether the play received a first, second, or third prize. Whether this was intended to be prefixed to the plays in his edition or to stand in the commentary volume is unclear.

other entities with the same name?

For other uses, see Aristophanes (disambiguation).

Aristophanes of Byzantium (Ancient Greek: Ἀριστοφάνης ὁ Βυζάντιος Aristophánēs ho Buzántios; Byzantium c. 257 - Alexandria c. 185-180 BC) was a Hellenistic Greek scholar, critic and grammarian, particularly renowned for his work in Homeric scholarship, but also for work on other classical authors such as Pindar and Hesiod. He soon moved to Alexandria and studied under Zenodotus, Callimachus, and Dionysius lambus. He succeeded Eratosthenes as head librarian of the Library of Alexandria at the age of sixty. His students included Callistratus, Aristarchus of Samothrace, and perhaps Agallis. He was succeeded by Apollonius "The Classifier" (not to be confused

Ο Αριστοφάνης ο Βυζάντιος (περ. 257 - περ. 180 π.Χ.) υπήρξε σημαντικός Έλληνας φιλόλογος και διευθυντής της Βιβλιοθήκης της Αλεξανδρείας. Τα έργα του, τα οποία σώζονται μόνο αποσπασματικά, ασχολούνται με θέματα γραμματικής, ανάλυσης κειμένων και την φιλολογία. Μελέτησε τον τονισμό τον λέξεων και εφηύρε τους τόνους και τα σημεία στίξεως που χρησιμοποιούνται μέχρι σήμερα στην ελληνική γλώσσα, δημιουργώντας την πολυτονική γραφή της Ελληνικής γλώσσας. Μαθητής του ήταν ο Αρίσταρχος ο Σαμόθραξ ο οποίος τον διαδέχθηκε ως διευθυντής της Βιβλιοθήκης της Αλεξανδρείας.

What if I want to create a more abstract

level?

How can I modify the Knowledge Graph to:

Declare *Eumenides* as a Play?

Add Play as a Class node

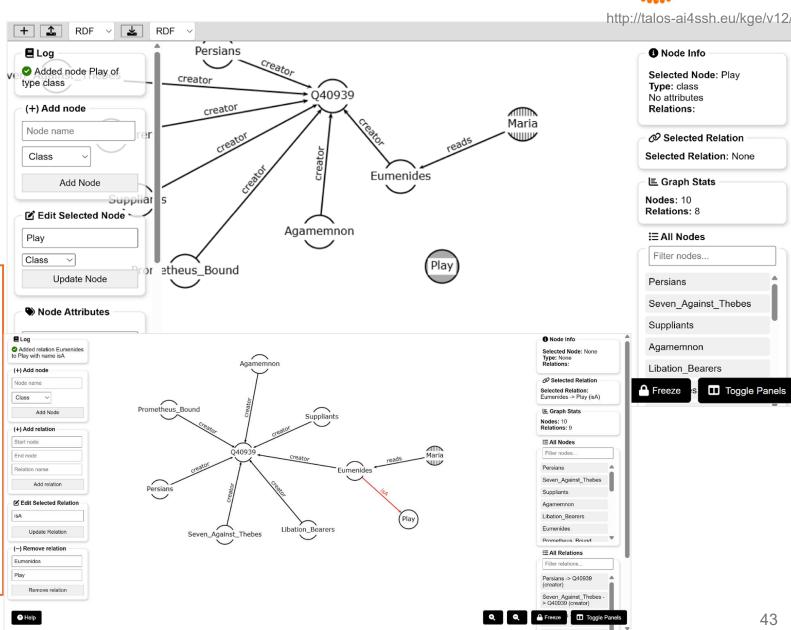

&

<u>Link</u> **Eumenides** to **Play** using the **isA relation**.

The following code snippets show how

- the Class Play
- the individual Eumenides
 - and relevant information

are tagged.

What if I want to create a more abstract

How can I modify the Knowledge Graph to:

Declare *Aeschylus* as a Tragic Poet?

Add Tragic Poet as a Class node & Link Aeschylus to Tragic Poet using the isA relation.

Congratulations!

You have just created **your first Knowledge Graph** / **RDF** / **Semantic Web** Dataset!
